Sir Richard Branson
Virgin Management Limited
120 Campden Hill Road
London W8 7AR

Dear Sir,

I read of your generous contribution to help reduce global warming and thought you might be interested in the following:

- 76 years ago the President of General Motors predicted 80-mpg by 1939
- 69 years ago Ford Motor Co. tested a 170-mpg Pogue carburetor
- 32 years ago Shell Oil Co demonstrated a 376-mpg automobile
- 28 years ago a 100-mpg Ford V-8 was demonstrated
- 22 years ago Peugeot advertised a 72-mpg @ 56-mph Diesel.
- 21 years ago hydrogen was proposed as aviation fuel
- 2 years ago an English newspaper article announced a 104-mpg Toyota Diesel and 94-mpg VW/Audi Diesels
- Commercial fuel cell vehicles have been available in Europe for years.
- Many U.S. Patents exist for devices that separate the elements of water for use as fuel, one patent #603,058 was granted in 1898.

Documentation is for the above is on the included CD.

Also on the CD, in #12, is video of different vehicles using the components of water for fuel. These are not fuel cell powered vehicles with electric motors or are they fueled from a source external to the vehicle. The engines in these vehicles are conventional internal combustion engines running on the components of water. A device connected to a tank of water supplies fuel to the engine. One inventor has been running engines on water for over 30-years.

Regards,

Byron Wine

Dear Mr Wine,

Many thanks for your letter addressed to Richard Branson and kind words of support. Unfortunately Richard is unable to respond to all letters personally due to the sheer number he receives but I would like to thank you on his behalf. We appreciate your comments.

Yours sincerely,

Eva Morales
Virgin Fuels
