

Representative Frank Wolf
U.S House of Representatives
Washington, DC 20515

Dear Representative Wolf,

I appreciate this opportunity to meet with you.

I request your comments concerning the attached information concerning various energy devices, a 1967 government report and the privately owned Federal Reserve System.

* Several U.S. Patents exist for devices that allow an engine to burn water for fuel, and decades old technology proves that 100 MPG automobiles could be produced. Yet, we sent more than 500,000 of our citizens to defend oil wells.

* The 1967 report contains these statements: (Page 38) "Economic surrogates for war must meet two principal criteria. They must be "wasteful," in the common sense of the word, and they must operate outside the normal supply-demand system. A corollary that should be obvious is that the magnitude of the waste must be sufficient to meet the needs of a particular society. An economy as advanced and complex as our own requires the planned average annual destruction of not less than 10 percent of gross national product¹ if it is effectively to fulfill its stabilizing function."; (Page 40) "Another economic surrogate that has been proposed is a series of giant "space research" programs. These have already demonstrated their utility in more modest scale within the military economy. What has been implied, although not yet expressly put forth, is the development of a long-range sequence of space-research projects with largely unattainable goals."; (Page 40) "Space research can be viewed as the nearest modern equivalent yet devised to the pyramid-building, and similar ritualistic enterprises, of ancient societies. It is true that the scientific value of the space program, even of what has already been accomplished, is substantial on its own terms. But current programs are absurdly and obviously disproportionate, in the relationship of the knowledge sought to the expenditures committed.". Yesterdays paper contained information regarding 2 Billion dollar losses in the space program.

* A privately owned bank is in control of the U.S. economy and we are concerned with reducing our national debt.

The NAFTA treaty is discussed on many radio talk shows, generally the opinions expressed are not favorable. I heard a lady relate her experience when she tried to obtain copies of the "side agreements" from her Congressman. She was informed that the "side agreements" were not available to the public. This is a hell of a response from the office of an elected official. I wonder what's being hidden from the citizens. Unfortunately, the NAFTA treaty copy that I ordered has not arrived. What is your opinion of the possible consequence of this agreement on the U.S. economy?

Recently I've heard that the government intends to regulate the distribution of vitamins and other over the counter medical products. Is this true? Will you please provide any information that you might have concerning this matter.

Thank you for your concern in your constituents options.

Sincerely,

Byron S. Wine III
